The conference is jointly organized by the Department of Business Law, Faculty of Economic and Social Sciences of the Budapest University of Technology and Economics, Budapest, Hungary; Department of Law, Faculty of Law & Management, University of Mauritius, Mauritius; Department of Private International Law, Faculty of Law, University of Szeged, Szeged, Hungary; Faculty of Law and Business Studies Dr Lazar Vrkatić, Novi Sad, Serbia; Faculty of Law, Ankara Yıldırım Beyazıt University, Ankara, Turkey; Faculty of Law, Yozgat Bozok University, Yozgat, Turkey and Iustinianus Primus Faculty of Law, Ss. Cyril and Methodius University, Skopje, Macedonia.

Digitalization and new technologies have caused legal science to enter a period of transformation that we have perhaps never seen before in legal history. The rapidly approaching new challenges present enormous difficulties for regulators. It is often said that law is lagging several years behind the new technologies. If so, this position seems increasingly untenable as technological transformation of society accelerates. The purpose of this conference is therefore to study these developments from a legal perspective and to attempt to identify issues we face, and of course, to suggest solutions how to resolve them the most efficient way.

The most affected issues by this technological development are among others data protection, intellectual property rights, cybersecurity and online crimes, e-commerce and contract law, online platforms, blockchain and cryptocurrency. Or to mention artificial intelligence, which is taking over the drafting of contracts, legal research and even drafting laws and administrative acts in some cases. In essence, this means that regulators and legal practitioners increasingly delegate their responsibilities to technology. The long-term consequences of this on the legal field are difficult to predict.

Furthermore, computer and communications technologies are transforming legal practice. Technology affects lawyers on two levels. First, it allows them to perform traditional tasks more effectively. Second, it is changing the very nature of what lawyers do. This in turn can cause further uncertainty regarding the future. Lot of times those who apply the law in practice try to fit new technological solutions into existing legal boxes. Nevertheless, this is not easy to accomplish, and can often cause regulatory anomalies.

However, we have to face these issues with optimism. First of all, national regulators should respond more quickly to these challenges. Secondly, standardization made more efficient trade and industry. This can be also true for legal regulation. Regulating these issues on international level with international instruments can help to overcome challenges.

Conference program

Opening remarks 10.00 – 10.15 (CET)

Sr. Lect. Zoltan Vig (Department of Private International Law, Faculty of Law, University of Szeged, Szeged, Hungary)

Session 1 10.15 – 11.45 (CET)

Chair: Prof. Rajendra Parsad Gunput (Department of Law, Faculty of Law & Management, University of Mauritius, Mauritius)

Proposing a framework to empower students with disabilities to access legal education through the use of technology and innovation (Krishnee Appadoo, University of Mauritius)
